a The schedule sets the requirement
this schedule: four one-day windows in 150 days, needing 1699×
readout-error ceiling, 2700×
required channel dynamic range
false : true marks
α = 0.2
α = 0.1
α = 0.05
measured ENGRAM channels, 11.5× to 22.6×
share of a cell's writes falling inside an exposure window (%)
b Readout error caps what tightening buys
if misreads were detectable
real misreads
bits per recovered cell
a misread clock symbol reads as an exposure symbol, so the curves part above the ceiling
ceiling 2700×
channel dynamic range
